16. Abstract (Limit: 200 words)

This document reports on a survey conducted by the U.S. Environmental Protection Agency (EPA) to help assess the capacity of the private sector to provide services related to the diagnoses and mitigation of indoor air quality problems in residential buildings, public buildings, commercial buildings, and other non-industrial environments. Questionnaires were mailed to approximately 7000 firms who EPA thought were potentially offering such services.

The body of the report provides a brief summary of the survey findings. In the appendices, the report provides a copy of the questionnaire, lists the firms alphabetically and by State and city, provides addresses and telephone numbers, summarizes their answers to the questionnaire, and provides brief guidance for those seeking the services of such firms. EPA did not attempt to verify the accuracy of the responses received. Therefore, inclusion of any firm does not imply approval, recommendation, endorsement, or accreditation of any kind by EPA. Users are asked to report any representation to the contrary to the Indoor Air Division (ANR-445), Environmental Protection Agency, Washington, DC 20460.

DISCLAIMER

This document reports on a survey conducted by the Environmental Protection Agency (EPA) during the fall of 1988, in which firms providing indoor air quality diagnostic and mitigation services were invited to fill out a voluntary survey questionnaire.

EPA did not attempt to verify the accuracy of the information reported by the respondents or to evaluate the quality of the services they claimed to provide. EPA assumes no legal liability or responsibility for the accuracy of the information or the quality of the services provided by the respondents. Reference to any firm or service in this report does not constitute or imply approval, recommendation, endorsement, or accreditation of any kind by EPA. Representation to the contrary by any individual or firm should be brought to the attention of the Indoor Air Division (ANR-445), Environmental Protection Agency, 401 M Street, SW, Washington, D.C., 20460.

In addition, EPA recognizes that the firms identified here do not constitute a complete listing of firms which provide indoor air quality diagnostic and mitigation services. Therefore, EPA invites any firm which provides such services to submit a completed survey questionnaire. Questionnaire forms may be duplicated from Appendix A and sent to the Indoor Air Division at the above address. Data from newly submitted questionnaires will be included in any future updates of this report. EPA welcomes comments by any individuals or organizations that use this report.

EXECUTIVE SUMMARY

The U.S. Environmental Protection Agency (EPA) conducted the Survey of Indoor Air Quality Diagnostic and Mitigation Firms under the authority of Title IV of the Superfund Amendments and Reauthorization Act of 1986 (the Radon Gas and Indoor Air Quality Research Act), which directs the Agency to gather data and information on all aspects of indoor air quality (IAQ). The purposes of the survey were (1) to develop information to characterize the private sector's current capability to provide IAQ diagnostic and mitigation services in non-industrial settings (e.g., residences, office buildings, and schools); (2) to provide a baseline of information for comparison with future surveys; (3) to ascertain the geographical availability of these services; and (4) to make this information available to organizations and individuals who have a need for these services.

In order to identify as many IAQ service firms as possible, EPA consulted four existing sources: the Yellow Pages for major metropolitan areas; directories from IAQ-related professional organizations; lists developed by EPA's radon and asbestos programs; and lists provided by State IAQ contacts. In addition, EPA issued press releases to more than 50 major industry magazines and local newspapers, and placed advertisements or announcements in IAQ-related newsletters and magazines.

Through these sources, EPA identified approximately 7,000 firms potentially offering IAQ services, and sent each firm a survey questionnaire (see Appendix A for a copy of the questionnaire). Nearly 1,200 firms returned a completed questionnaire, which provided information in nine categories:

- firm name and address (firms providing services out of more than one location were considered separate entities);
- licensing, accreditation, or certification;
- types of non-industrial buildings serviced;
- pollutants monitored and techniques used;
- evaluation services offered;
- mitigation services offered;
- IAQ professionals employed;
- number of years in the IAQ business; and
- portion of business represented by non-industrial IAQ services.

The information supplied by the responding firms was entered into a computerized database program that EPA developed for storing and analyzing the data. **The Agency did not, however, attempt to verify responses or evaluate the quality of services offered by the responding firms. As a result, reference to any firms or service in this report does not constitute or imply approval, recommendation, endorsement, or accreditation of any kind by EPA. Representation to the contrary by any individual or firm should be brought to the**

attention of the Indoor Air Division (ANR-445), Environmental Protection Agency, 401 M Street, SW, Washington, D.C., 20460.

A total of 965 IAQ firms are characterized in detail in this report; 199 additional responding firms were characterized separately from the main database because their services appear to only address radon and/or asbestos. These 199 firms do not appear to diagnose and/or mitigate other IAQ problems. In addition, there are specific Federal programs designed to address the risks associated with exposure to radon or asbestos. All private sector firms which responded to the survey questionnaire are included in the directory of firms contained in Appendix B.

There are a number of important results of the analysis of the 965 IAQ firms:

- The non-industrial IAQ service industry is at an early stage in its development. Although some firms have been providing IAQ diagnostic and/or mitigation services for several decades, 47 percent have provided these services in non-industrial settings for ten or fewer years.

- Most of the firms devote a relatively small percentage of their business to providing IAQ services to non-industrial clients.

- Most of the nation's current non-industrial IAQ capacity is in the eastern part of the nation. The results of the survey indicate that a large majority of the IAQ firms (66 percent) are located in EPA Regions I - V (which include the states east of the Mississippi River). Forty-five (45) percent of the nation's firms, however, responded that they serve a national client base.

- Although the IAQ service industry as a whole provides a diversity of diagnostic and mitigation services, individual firms tend to be relatively specialized and geared toward diagnostic services. A very small proportion of the IAQ firms provide a wide range of both diagnostic and mitigation services. Most firms specialize in one type of IAQ service, typically providing a limited number of evaluation services, or monitoring a subset of pollutants. Similarly, a relatively small percentage of firms offer a broad range of mitigation services.

- The average national firm is relatively small, with an average of only 18 employees.

I. INTRODUCTION

In response to growing concern over the risk of adverse health effects posed by exposure to indoor air pollutants, the U.S. Congress enacted Title IV of the Superfund Amendments and Reauthorization Act (SARA), entitled the Radon Gas and Indoor Air Quality Research Act of 1986. Title IV directs the Environmental Protection Agency (EPA) to develop a research program on radon gas and indoor air quality. Section 403(a) of Title IV states that the program shall be designed to accomplish three tasks:

(1) gather data and information on all aspects of indoor air quality in order to contribute to the understanding of health problems associated with the existence of air pollutants in the indoor environment;

(2) coordinate Federal, State, local, and private research and development efforts relating to the improvement of indoor air quality; and

(3) assess appropriate Federal Government actions to mitigate the environmental and health risks associated with indoor air quality problems.

The Office of Air and Radiation conducted a voluntary survey of indoor air quality diagnostic and mitigation firms from August 1988 to April 1989. The purposes of the survey were (1) to develop information to characterize the private sector's current capability to provide IAQ diagnostic and mitigation services in non-industrial settings (e.g., residences, office buildings, and schools); (2) to provide a baseline of information for comparison with future surveys; (3) to ascertain the geographical availability of these services; and (4) to make this information available to organizations and individuals who have a need for these services.

This report discusses the survey methodology and summarizes major results of the analysis. A copy of the survey questionnaire is provided in Appendix A. Appendix B lists the firms by state and city, and summarizes their characteristics and services they provide. Appendix C lists the firms alphabetically and identifies the city and state in which they are located.

EPA did not attempt to verify responses to survey questions or to assess the quality of the IAQ services provided by the respondents. Inclusion in Appendix B does not constitute or imply approval, recommendation, endorsement, or accreditation of any kind by EPA. Representation to the contrary by any individual or firm should be brought to the attention of the Indoor Air Division (ANR-445), Environmental Protection Agency, 401 M Street, SW, Washington, D.C., 20460.

II. METHODOLOGY

In order to characterize the IAQ service industry and to assess its capability to meet the demand for non-industrial IAQ diagnostic and mitigation services, EPA conducted a survey of firms that provide these services.[1] This section describes the process EPA used to identify the firms that received the survey questionnaire, the design of the questionnaire, and the development of the survey database.

A. Identification of Firms to be Included in the Survey

In developing the list of firms to be included in the survey, EPA decided to identify as many private sector firms as possible that provide IAQ services in non-industrial settings. There were two major reasons for this decision. First, EPA did not have sufficient information about the characteristics of the IAQ service industry to select a statistically valid sample of firms from which to project characteristics of the total universe of IAQ firms. Second, because the IAQ service industry is growing rapidly, is fairly diversified, and is relatively unregulated, there is no comprehensive directory of firms providing non-industrial IAQ services.

To develop this list, EPA used five major sources to identify the firms that were likely to be involved in the IAQ service industry:

- Yellow Pages listings for major metropolitan areas;
- directories from IAQ-related professional organizations;
- lists developed by EPA's radon and asbestos programs;
- lists provided by State indoor air quality contacts; and
- advertisements and announcements placed in relevant periodicals.

Using these sources, EPA developed a list of nearly 7,000 firms, each of which received a survey questionnaire. EPA was not able to determine in advance whether each of these firms actually provides IAQ services in non-industrial settings and assumed that recipients of the questionnaire who do not provide these services would not return the questionnaire.

Yellow Pages Listings for Major Metropolitan Areas

On the assumption that many IAQ firms would be located, or at least advertise, in major cities, EPA examined the Yellow Pages listings for the fifty largest metropolitan areas in the United States and the largest metropolitan area in each of the fifty States, for a total of 70 cities. The geographic coverage of metropolitan areas differed among Yellow Pages. Some metropolitan Yellow Pages served entire states (e.g., Utah and North Dakota), whereas others only served parts of metropolitan areas. (e.g., New York City). These listings yielded over 3,000 potential IAQ firms.

---

[1] EPA limited the scope of the survey to non-industrial IAQ services because programs of the Occupational Safety and Health Administration (OSHA) apply most directly to IAQ in industrial settings. In addition, most of the recent attention on the potential health risks posed by exposure to indoor air pollutants has focused on non-industrial settings, whose occupants and users include certain sub-populations, such as children, elderly persons, and pregnant women, that may be more sensitive to the effects of these pollutants.

EPA used Business-to-Business Yellow Pages (rather than the regular Yellow Pages) where available because a preliminary investigation had indicated that IAQ firms target their advertisements much more frequently to the business sector than to the general public. In addition, Business-to-Business Yellow Pages typically cover a larger metropolitan area. Thus, for a given metropolitan area, the Business-to-Business Yellow Pages usually have many more listings for IAQ firms than the corresponding regular Yellow Pages.

In each metropolitan area, EPA sent a survey questionnaire to firms that listed themselves under one or more of seven categories:

- Air Cleaning and Purifying Equipment;
- Air Pollution Measuring Services/Equipment;
- Air Pollution Control;
- Environmental Consultants;
- Engineers - Environmental;
- Industrial Hygiene Consultants; and
- Laboratories - Air Testing.

It was understood that many of these firms would not provide IAQ services, and that some firms would provide only industrial IAQ services. EPA did not have enough information to discern which firms provide IAQ services in non-industrial settings and assumed that a firm that does not provide these services would not complete the survey questionnaire. EPA did not include in the database any firms that, based on information provided by the respondents, do not provide non-industrial IAQ services.

Directories from IAQ-Related Professional Organizations

EPA contacted a number of professional organizations that serve the IAQ service industry. Several organizations provided directories of IAQ firms, including the Air Pollution Control Association (APCA), the American Industrial Hygiene Association (AIHA), the National Environmental Balancing Bureau (NEBB), and Pollution Engineering magazine. These directories contained nearly 2,000 names. After screening these names to avoid duplication, EPA sent a questionnaire to each IAQ firm.

Lists developed by EPA's Radon and Asbestos Programs

Through its radon and asbestos programs, EPA has identified over 1,000 IAQ firms on three lists:

- "Radon/Radon Progeny Measurement Proficiency Program, Cumulative Proficiency Report," Office of Radiation Programs, EPA, September 1987.

- "EPA-Approved State Asbestos Accreditation Programs and Training Courses," EPA, 53 Federal Register 105, June 1, 1988.
- "Results of EPA Interim Accreditation for Laboratories with Polarized Light Microscope Capabilities for Bulk Asbestos Identification, Interim Listing," Number 24, EPA Bulk Analysis Round 17, Research Triangle Institute, January 1988.

These lists only include firms that provide radon or asbestos diagnostic or mitigation services, although many of these firms also provide IAQ services that address other pollutants. EPA sent a questionnaire to each of the firms appearing on these lists.

Lists Provided by State Indoor Air Quality Contacts

EPA recently published the Directory of State Indoor Air Contacts, which lists State officials who work on indoor air related projects. EPA sent a selected subset of these contacts in each State a survey questionnaire and requested them to submit a list of firms that provide IAQ services in non-industrial settings. Officials in several States submitted substantial lists, including Delaware, Georgia, Maryland, New Hampshire, New York, Ohio, Pennsylvania, and Washington; other States phoned EPA with shorter lists. This process yielded more than 500 firms, each of which EPA sent a questionnaire. As with EPA's lists, many of the State lists were comprised primarily of firms that provide radon diagnostic and/or mitigation services.

Advertisements and Announcements Placed in Relevant Periodicals

To identify firms that were not listed in the Yellow Pages or in the lists described above, EPA placed advertisements or announcements in many periodicals, inviting firms to participate in the survey. EPA placed a paid advertisement in four magazines that serve the IAQ industry: the American Industrial Hygiene Association Journal, the ASHRAE (American Society of Heating, Refrigerating and Air Conditioning Engineers) Journal, the Journal of Occupational Medicine, and Pollution Engineering. The following advertisement was used in the journals:

> *Does your firm offer indoor air quality diagnostic or mitigation services? The U.S. Environmental Protection Agency (EPA) is conducting a voluntary survey of firms that offer indoor air quality diagnostic and mitigation services for residences, schools, non-industrial buildings or hospitals and other health care facilities. EPA is interested in finding out how widely such services are available and is asking firms to complete a short profile describing the indoor air quality services they provide. This information will be entered into a national database of private sector indoor air quality firms.*

EPA also asked nine IAQ newsletters to publish an announcement of the survey, including Indoor Air News, Indoor Air Pollution News, and Inside EPA Weekly Report.

EPA issued a press release to over 50 major industry magazines, including Engineering News Report, and local newspapers announcing the survey.

The advertisements, press release, and announcements each provided an address and a toll-free hotline number in order to request a questionnaire. The hotline number was also printed on each survey for use by respondents who had questions about completing the survey. EPA responded to over 500 requests for questionnaires.

Although it is likely that the survey did not include all of the nation's IAQ firms, the data on the respondents should be reasonably representative of the universe of IAQ firms. As noted above, this extensive IAQ firm identification process yielded a broad list of firms. Nearly every IAQ firm in the nation should have had the opportunity to participate in the survey.

B. Design of the Survey Questionnaire and Development of the Survey Database

The purpose of the survey was to gather sufficient data to enable EPA to begin to characterize the IAQ service industry. EPA developed questions to address a number of areas necessary to conduct this characterization (see Appendix A for a copy of the questionnaire):

- firm name and address;
- regulatory approvals;
- types of non-industrial buildings serviced;
- pollutants monitored and techniques used;
- evaluation services offered;
- mitigation services offered;
- IAQ professionals employed;
- number of years in the IAQ business; and
- portion of business represented by IAQ services.

In order to standardize the data compilation and analysis (as well as facilitate completing the questionnaire), EPA provided responses for the firms to check off where appropriate. To allow flexibility in responses, for many questions, EPA provided space for the firm to enter supplemental information in response to open-ended questions.[2]

The cover letter to the questionnaire stressed that completing the survey was voluntary and that partial responses would be accepted. The letter also noted that firms that completed the questionnaire would be included in a national database, and provided a toll-free phone number for firms to call if they had questions about the survey.

---

[2] Twelve percent of the firms also submitted brochures, pamphlets, price lists, and other related information.

EPA developed a computerized database program to store and analyze the responses to the survey questionnaire. The following sub-sections detail the key assumptions that EPA used in order to enter or standardize some of the responses and discuss any important implications of these assumptions for interpreting the data.

Question 1 -- Name, Address, and Area Served

EPA screened each completed questionnaire to verify that the firm performs IAQ diagnostic and/or mitigation services in non-industrial settings. EPA did not enter responses from firms that explicitly stated that they only provide IAQ services in industrial settings, or from firms that did not provide a name or address.

The questionnaire instructions asked the respondent to complete a separate questionnaire for each location where the firm provides IAQ services. In instances where firms entered more than one location on a single questionnaire, EPA treated each location as a separate entry, using the same responses for each entry except firm address. When necessary, EPA called the contact person listed in Question 1 to determine the appropriate responses to other questions.

Question 2 -- Licensing, Certification or Accreditation

In entering responses to Question 2 into the database, EPA only included firm-wide licensing, certification or accreditation and omitted individual approvals. For example, because the American Board of Industrial Hygiene (ABIH) only certifies individuals, EPA did not enter ABIH certification into the database. In addition, firms occasionally misstated the type of approval granted by various regulatory authorities. When EPA had sufficient data, it corrected these responses. EPA could not, however, verify the accuracy of the responses for most of the non-Federal approval authorities and entered the responses verbatim.

Question 7 -- Personnel Available

Many firms noted the types of personnel that they employed but did not enter the number of personnel. To be conservative, EPA assumed in these cases that only one person was available for each type of personnel checked. In other cases, firms checked off more than one type of personnel but stated that the firm employed only one person. For these entries, EPA used the responses in the rest of the questionnaire to choose the personnel type that best fit the firm's activities.

Question 9 -- Portion of Business

Firms appeared to answer this question in one of two ways. Some firms listed the portion of time that the personnel listed in Question 7 spent performing non-industrial IAQ services. Other firms stated the portion of the total business represented by these services. It was not practical to call each respondent to determine the appropriate response. As a result, EPA entered the responses as received, and limited the analysis of this question to simple summary statistics.

III. RESULTS

EPA received nearly 1,200 completed survey questionnaires. A list of all firms that responded to the survey before the publication date of this report is provided in Appendices B and C. The lists only include private sector firms that EPA concluded provide IAQ services in non-industrial settings. EPA did not, however, verify responses to survey questions or evaluate the quality of the services offered by the firms. As a result, inclusion in Appendix B or C does not constitute or imply approval, recommendation, endorsement, or accreditation of any kind by EPA.

The firms in Appendix B are listed alphabetically by State and city. The entry for each firm includes firm name, address, phone number, number of employees, service area, types of buildings serviced, major evaluation activities performed, major pollutants monitored, mitigation activities conducted, and technical personnel employed.

EPA analyzed response data from 1,164 IAQ firms that responded to the survey by April 30, 1989. Several firms responded to the survey after this date; these firms are included in Appendix B but are not included in the analysis. This section describes the major results of the analysis.

Radon and Asbestos Firms

Many firms (199) that responded to the survey appear to deal solely with radon and/or asbestos contamination.[3] These pollutants are known causes of lung cancer, and there are specific Federal programs designed to address these hazards. Firms that monitor only radon and/or asbestos, however, may not be able to conduct the type of comprehensive building diagnostic and/or mitigation efforts that may be warranted for buildings whose occupants exhibit acute health symptoms, such as headaches, nausea, mucous membrane irritation, and respiratory ailments, resulting from unspecified building problems.

In order to characterize the IAQ firms that address complaints of acute building-related illnesses, the 199 firms dealing solely with these two pollutants were excluded from the database used for the majority of this report -- these firms are briefly characterized in Section III.B. and are also listed in Appendix B. The results described in Section III.A. solely concern the remaining 965 IAQ firms.

A. Characteristics of IAQ Firms

1. Number and Geographic Distribution of IAQ Firms and Employees

The 965 IAQ firms that responded are concentrated in the northeast part of the nation. EPA Regions I - V account for 66 percent of the firms (see Exhibit 1; also, see map of EPA

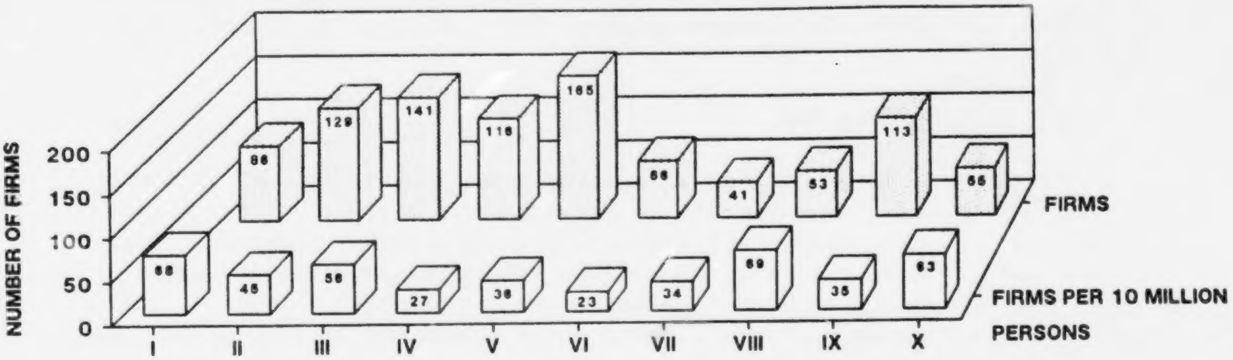
---

[3] The vast majority (74 percent) of the firms that monitor radon and/or asbestos do, however, monitor other pollutants as well.

Regions on page iv). Adjusted for 1987 population, the data indicate that Regions I, III, VIII, and X have the highest number of firms per capita, each of which is at least 40 percent greater than the national average.

Most of the firms provide IAQ services to a relatively large area -- 45 percent of the firms provide national coverage, 36 percent have a regional/multi-state service area, and 18 percent of the firms responded that they serve a local clientele.[4] Many firms stated that they serve more than one service area, i.e., national and regional/multi-state; these percentages refer to the largest service area claimed by each respondent.

EXHIBIT 1
IAQ FIRMS BY EPA REGION



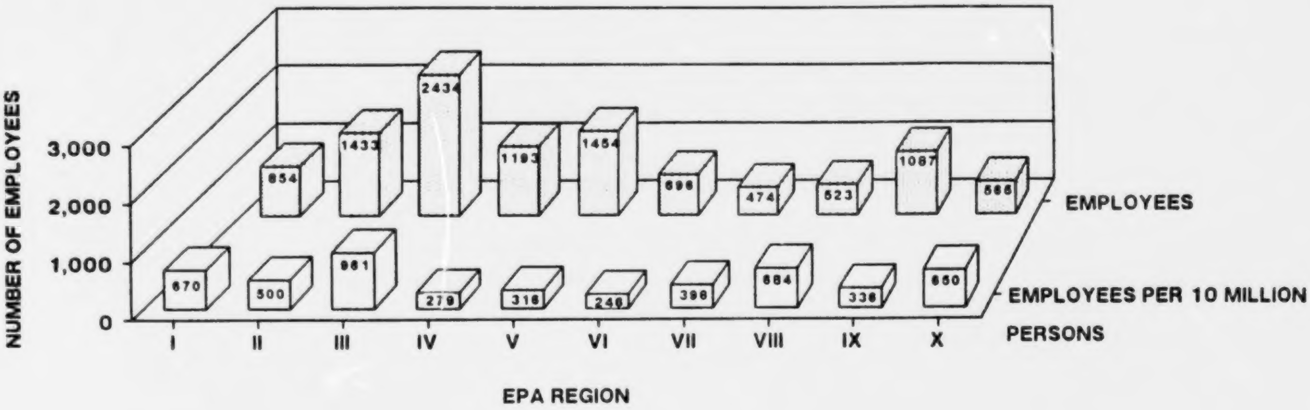
The IAQ firms responded that they have a total of 10,713 employees. The actual total is somewhat higher -- 127 of the 965 firms did not list the number of employees. Most of the IAQ employees are in Regions II, III, IV, V, and VIII (see Exhibit 2). These five Regions account for 71 percent of the IAQ employees. Regions I, III, VIII, and X have the highest number of employees per capita.

---

[4] One percent of the firms did not respond to the question.

IAQ firms have an average of 13 employees. The national firms are the largest firms, with an average firm size of 18 employees. This result indicates that even the national IAQ firms are relatively small. The regional firms have an average of ten employees, followed by local firms with an average of five employees. There is a wide range in the number of employees. Twenty-two (22) percent of the firms are one- or two-person firms; four percent of the firms employ more than 50 IAQ professionals.

EXHIBIT 2
IAQ EMPLOYEES BY EPA REGION



2. Types of Buildings Serviced by IAQ Firms

IAQ firms conduct diagnostic and/or mitigation services in a variety of buildings (see Exhibit 3). Over three-quarters of these firms conduct IAQ activities in one or more non-residential settings, whereas less than 60 percent conduct IAQ activities in residential settings.

Many of the firms that provide services in residential settings respond to radon concerns. Although only 45 percent of the firms nation-wide monitor radon, 58 percent of the firms that work in residential settings monitor radon.

EXHIBIT 3
TYPES OF BUILDINGS SERVICED BY IAQ FIRMS

Type of Building	Number of Firms	Percent of All Firms
Office Buildings	849	88 %
Public Buildings	795	82 %
Schools	766	79 %
Hospitals	726	75 %
Private Residences	563	58 %
Multi-Family Residences	546	57 %
Other[5]	267	28 %
Did Not Respond	49	5 %

3. Types of Diagnostic Services Offered by IAQ Firms

EPA developed several questions to assess the capability of the private sector to provide IAQ diagnostic services. The survey included questions on evaluation services, such as determining the air exchange rate, as well as questions concerning monitoring services, such as the types of pollutants monitored.

IAQ Evaluation Services

Over three-quarters of the IAQ firms provide one or more evaluation services (see Exhibit 4). On average, IAQ firms provide four of the evaluation services. Over 60 percent of the firms evaluate ventilation systems and/or measure temperature and relative humidity. Slightly over half (54 percent) characterize pollutant sources, an activity that is crucial for a successful mitigation effort. Only 25 percent of the firms assess the health status of building occupants.

Sixty-three (63) percent of the firms provide one or more of the four services that typically form the basis of IAQ evaluation efforts (i.e., evaluating ventilation systems, measuring temperature/relative humidity, measuring air exchange rates, and characterizing pollutant sources). Fifty-five (55) percent of the firms provide three or more of these services. These 529 firms are twice the size of the remaining 436 firms and have an average of 16 employees.

---

[5] Major entries under "other" include industrial buildings (12 percent), commercial buildings (three percent), and military buildings (two percent).

There are no major Regional variations in the proportion of firms that provide evaluation services. Across the nation, 80 percent of the IAQ firms provide some evaluation services; in the Regions, this proportion varies from 68 to 84 percent.

EXHIBIT 4
EVALUATION SERVICES PERFORMED BY IAQ FIRMS

Evaluation Service	Number of Firms that Provide Service	Percent of All Firms
One or More Evaluation Service	769	80 %
Ventilation System Evaluation	598	62 %
Temperature/Relative Humidity	591	61 %
Air Exchange Rate	541	56 %
Pollutant Source Characterization	519	54 %
Noise	509	53 %
Lighting	283	29 %
Occupant Health Status	238	25 %
Other[6]	188	19 %
Psycho-social Factors	133	14 %

IAQ Monitoring Services

IAQ firms monitor a wide variety of indoor air pollutants (see Exhibit 5). The vast majority (84 percent) of the 965 IAQ firms monitor one or more indoor air pollutants.

The average IAQ firm monitors a relatively large number of pollutants. Forty-eight (48) percent of the firms monitor 11 or more of the pollutants listed in the questionnaire, whereas only 23 percent monitor five or less of the pollutants. The firms that monitor only a few pollutants tend to be smaller on average. The firms that monitor one to five pollutants have an average of five employees, whereas the firms that monitor more than 11 pollutants employ an average of 18 persons (the national average is 13 persons per firm).

A relatively small number of firms (264, or 26 percent), however, monitor the presence of biological contaminants, many of which have been implicated in cases of building-related illnesses. There are several possible reasons for this phenomenon. First, concern over building-

---

[6] There were no predominant responses to this question. The most frequent responses include asbestos-specific evaluation techniques (one percent), ergonomics (one percent), and health and safety (one percent).

EXHIBIT 5
TYPES OF POLLUTANTS MONITORED BY IAQ FIRMS

Pollutant Monitored	Number of Firms that Monitor Pollutant	Percent of Firms
One or More Pollutant	810	84 %
Formaldehyde	625	65 %
Carbon Monoxide	581	60 %
Airborne Particles	580	60 %
Asbestos	557	58 %
Other VOCs	544	56 %
Lead	524	54 %
Carbon Dioxide	521	54 %
Nitrogen Dioxide	497	52 %
Sulfur Dioxide	490	51 %
Mercury	462	48 %
PCBs	448	46 %

Other[7]	261	27 %
Biological Agents	264	26 %

---

[7] There were no predominant "other" pollutants. The most frequently cited "other" pollutants were bacteria (four percent), hydrogen sulfide (two percent), and noise (two percent).

related illnesses has only recently become widespread. In addition, there are no well-established concentration standards for biological agents, making it difficult to determine whether measured concentrations are elevated.

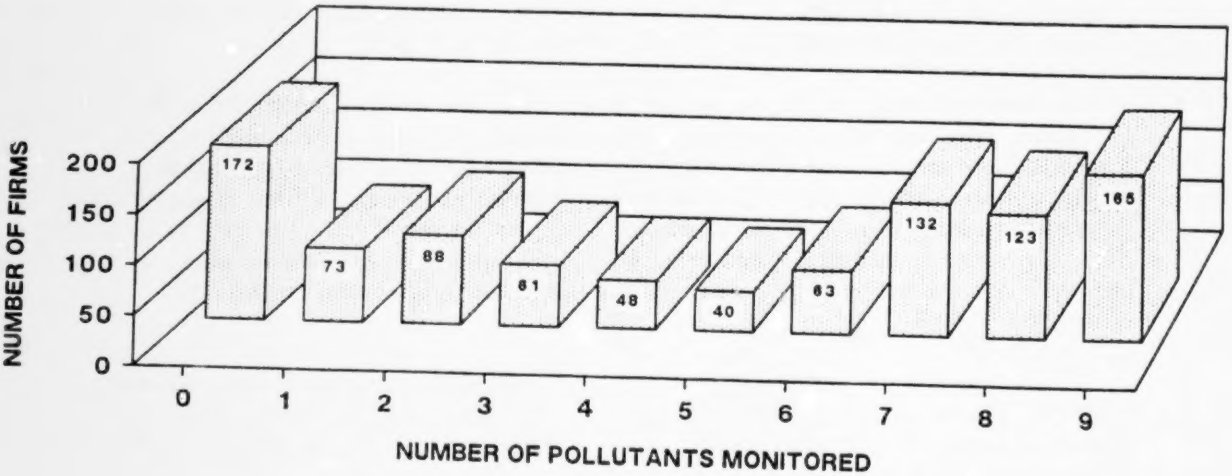
There are no significant Regional variations in the proportion of firms that monitor one or more indoor air pollutants. Nationwide, 84 percent of the IAQ firms provide monitoring services; this proportion varies from 79 to 94 percent in the Regions.

There are, however, Regional variations for firms that monitor radon (this analysis does not include firms that only monitor radon; these firms are discussed in Section III.B.). In Region I, there are 36 percent more firms that monitor radon than would be predicted by simply multiplying the number of firms in Region I by the percentage of firms in the nation that monitor radon; Region III has 25 percent more and Region II has 12 percent more radon firms than would be expected. Conversely, Region VI, an area of low public concern over elevated radon levels, has 36 percent fewer radon monitoring firms than the national distribution of firms would predict.

Because there are many potential causes of IAQ-related complaints firms may need to monitor a wide variety of pollutants. In order to assess which IAQ monitoring firms are capable of conducting a comprehensive analysis of individual pollutants or mixtures, EPA examined this capability in terms of nine commonly monitored pollutants: carbon monoxide, carbon dioxide, nitrogen dioxide, airborne particles, formaldehyde, other VOCs, asbestos, radon, and biological agents. Although 394 firms (41 percent) monitor three or fewer of these pollutants, 420 firms (44 percent) monitor seven or more of the nine pollutants (see Exhibit 6). The number of pollutants that a firm is able to monitor is correlated with the number of employees; firms that monitor three or fewer pollutants have seven employees on average whereas firms that monitor seven or more pollutants have 19 employees on average.

EPA analyzed the data to determine the number of firms that are capable of providing a wide range of IAQ diagnostic services by offering both evaluation and monitoring services. Whereas the vast majority of firms provide some evaluation services (80 percent) or provide some monitoring services (84 percent), only 319 firms (33 percent) conduct three or more of the four predominant evaluation activities and monitor seven or more of the nine pollutants listed above. This result suggests that most firms that provide diagnostic services are relatively specialized. The 319 firms that provide a wide range of diagnostic services tend to be much larger (21 employees on average) than firms that do not provide this range (eight employees on average).

EXHIBIT 6
CAPABILITY OF IAQ FIRMS TO CONDUCT COMPREHENSIVE MONITORING ANALYSIS



Note: The nine pollutants used in this analysis are carbon monoxide, carbon dioxide, nitrogen dioxide, airborne particles, formaldehyde, other VOCs, asbestos, radon, and biological agents.

4. Types of Mitigation Services Offered by IAQ Firms

A large majority of the IAQ firms (86 percent) provide one or more of the mitigation services included in the questionnaire (see Exhibit 7). Less than half of these firms provide a wide spectrum of mitigation services -- only 407 firms (42 percent) provide four or more of the mitigation services.

The two most prevalent mitigation activities are providing design recommendations (65 percent) and training building managers and occupants (49 percent). These services tend to be "advisory" in nature. A much smaller percentage of the firms are involved in more "direct" mitigation activities -- operation and maintenance (40 percent), ventilation system modification (39 percent), and source removal or modification (37 percent). Only 344 firms (36 percent) of the IAQ firms conduct two or more of these three activities, indicating that few firms provide a wide range of mitigation services. These 344 firms are not significantly different in size from the remaining firms.

As with the diagnostic services, there are no major Regional variations in the proportion of firms that provide mitigation services. Across the nation, 86 percent of the IAQ firms provide some mitigation services; in the Regions, this proportion varies from 74 to 91 percent.

The 155 firms that do not monitor any indoor air pollutants tend to be oriented toward mitigation. Ninety-two (92) percent of these firms provide one or more mitigation services; 45 percent provide two or more of the "direct" mitigation services. Sixty-eight percent of these firms provide one or more evaluation services; 48 percent provide three or more of the four prominent evaluation services listed above.

EXHIBIT 7
MITIGATION SERVICES PERFORMED BY IAQ FIRMS

Mitigation Service	Number of Firms that Provide Service	Percent of All Firms
One or More Mitigation Service	828	86 %
Design Recommendations	632	65 %
Training of Building Managers/Occupants	470	49 %
Operation & Maintenance	383	40 %
Ventilation System Modification	376	39 %
Source Removal/Modification	372	37 %
Air Cleaning/Filtration Equipment	354	37 %
Architectural Engineering Specifications	321	33 %
Actual Construction/Renovation	149	15 %
Other[8]	136	14 %
Building Commissioning	106	11 %

Overall Scope of IAQ Services Offered

There are a very limited number (136, or 14 percent) of IAQ firms that provide three or more of the predominant evaluation services, monitor seven or more of the nine identified pollutants, and conduct two or more of the "direct" mitigation activities. This result indicates that most IAQ firms are specialized and primarily focus on providing monitoring, evaluation, or mitigation services. As would be expected, the "full service" firms are much larger; with an average of 19 employees, these firms are 50 percent larger than the average IAQ firm.

---

[8] The most frequent responses to this question were consultation (one percent), lab services (one percent), and training (one percent).

The capability of a firm to provide a wide range of evaluation or monitoring services is highly correlated with firm size (see Exhibit 8). This relationship is not evident for mitigation services.

EXHIBIT 8
RELATIONSHIP OF FIRM SIZE TO SCOPE OF IAQ SERVICES

	Percent of Firms Providing[9]		
Number of Employees	Major Evaluation Services	Comprehensive Monitoring Services	Major Mitigation Services
1 - 2	21 %	46 %	36 %
3 - 10	52 %	59 %	38 %
11 - 20	63 %	63 %	35 %
21 - 50	78 %	74 %	43 %
> 50	86 %	91 %	34 %

5. Other Characteristics of IAQ Firms

Personnel Available

The firms that responded to the survey employ a diverse group of IAQ professionals. There are no predominant types of technical personnel (see Exhibit 9). Industrial hygienists, chemists, and air pollution scientists account for 52 percent of the nation's IAQ professionals. Only 14 percent of the IAQ professionals are ventilation or industrial engineers.

There is considerable variation in the technical expertise firms have to perform the services that they claim to offer (see Exhibit 10). For example, only two-thirds of the firms that provide design recommendations employ personnel that appear to have specific professional qualifications to provide this service. Conversely, of the firms that assess occupant health status, 92 percent employ one or more of the relevant personnel, most of whom are industrial hygienists.

---

[9] "Major evaluation services" refers to firms that provide three or more of the predominant evaluation services; "comprehensive monitoring services" refers to firms that monitor seven or more of the identified pollutants; and "major mitigation services" services refers to firms that provide two or more of the "direct" mitigation services referred to in the text.

EXHIBIT 9
PERSONNEL EMPLOYED BY IAQ FIRMS

Personnel Type	Number of Firms That Employ Personnel	Percent of Firms	Number of Personnel	Percent of Personnel
Industrial Hygienist	513	53 %	2,103	20 %
Chemist	474	49 %	2,208	21 %
Air Pollution Scientist	360	37 %	1,250	12 %
Ventilation Engineer	355	37 %	795	7 %
Other[10]	327	34 %	2,186	20 %
Industrial Engineer	248	26 %	706	7 %
Microbiologist	198	21 %	290	3 %
Toxicologist	185	19 %	310	3 %
Architect	159	16 %	542	5 %
Medical Doctor	122	13 %	180	2 %
Epidemiologist	60	6 %	87	1 %
Psychologist	35	4 %	56	1 %
Total	965	100 %	10,713	100 %

One-Person Firms

Twelve (12) percent of the firms have only one IAQ professional. These one-person firms tend to be relatively specialized, but overall they do not provide a substantially different range of IAQ services from the larger firms. Overall, these firms tend to monitor the same types of pollutants and conduct the same mitigation activities in the same proportions as the 965 IAQ firms.

The one-person firms are, however, more likely to provide evaluation services. For most evaluation services, the proportion of one-person firms providing the service is roughly 25 percent higher than the corresponding proportion of all IAQ firms. For example, 79 percent of the one-person firms provide ventilation system evaluations, whereas only 62 percent of all IAQ firms provide this service.

---

[10] The most frequently cited "other" personnel types were geologist (five percent), environmental engineer/scientist (four percent), and chemical engineer (four percent).

These firms employ a slightly different spectrum of employees. Forty-two (42) percent of these firms employ personnel other than those listed in the questionnaire -- approximately half of these other personnel are geologists. Twenty-seven (27) percent employ a ventilation engineer, followed by industrial hygienist (19 percent), chemist (11 percent), and air pollution scientist (11 percent).

EXHIBIT 10
ABILITY TO PROVIDE IAQ SERVICES

	Percent of Firms that Employ Professionally Qualified Personnel		
	Service Provided		
Personnel Type	Design Recommendations	Ventilation System Modifications	Occupant Health Status
Architect	24 %	21 %	
Ventilation Engineer	50 %	61 %	
Industrial Engineer	34 %	35 %	
Medical Doctor			28 %
Epidemiologist or Toxicologist			47 %
Industrial Hygienist			89 %
One or More of the Identified Personnel	65 %	73 %	92 %
Number of Firms Providing Service	632	376	238

Portion of Business Represented by Non-Industrial IAQ Activities

Providing IAQ services for non-industrial clients constitutes a relatively small fraction of the business for most of the firms that responded to the survey. Thirty-one (31) percent of the firms' business consists of providing IAQ services to non-industrial clients; the median for all firms is 15 percent. Using only the survey responses, it is not possible, however, to determine whether the remainder of the firms' business is comprised of providing IAQ services to industrial clients or consists of unrelated activities.

Age of IAQ Service Industry

The IAQ service industry is, as a whole, relatively young. Most firms have entered the IAQ industry relatively recently (see Exhibit 11). The firms in the database have been performing IAQ services for an average of ten years.[11] A number of firms stated they had been performing IAQ services for over 30 years, up to a maximum of 100 years. These firms skew the distribution; the median number of years is six.

Firms that monitor and/or mitigate radon tend to be younger on average, having provided IAQ services for an average of seven years, with a median of five years. Firms that do not provide radon services have been in the IAQ business an average of 12 years, with a median of nine years. This large age differential is not evident for the other major indoor air pollutants, including asbestos.

Licensing, Certification or Accreditation

The IAQ industry is largely unregulated. There is no nationally accepted private or governmental agency that licenses, certifies, or accredits IAQ firms. Only 53 percent of the firms responded that they were licensed, certified, or accredited by one or more private or governmental agencies. The regulatory approvals were split almost equally among Federal, State and local, and private agencies, with no single type of approval cited by more than 15 percent of the firms. In addition, many of the firms are licensed, certified, or accredited for only one pollutant.

B. Characteristics of Radon and/or Asbestos Firms

There were 199 responses from firms that solely monitor radon and/or asbestos, primarily radon (86 percent). As noted above, these firms were not included in the analysis of available IAQ services. This section briefly highlights the major characteristics of these firms.

Regional Distribution

These firms are highly concentrated in the northeast States. Regions II and III account for 56 percent of the firms; Regions VI - X account for only 14 percent of the firms.

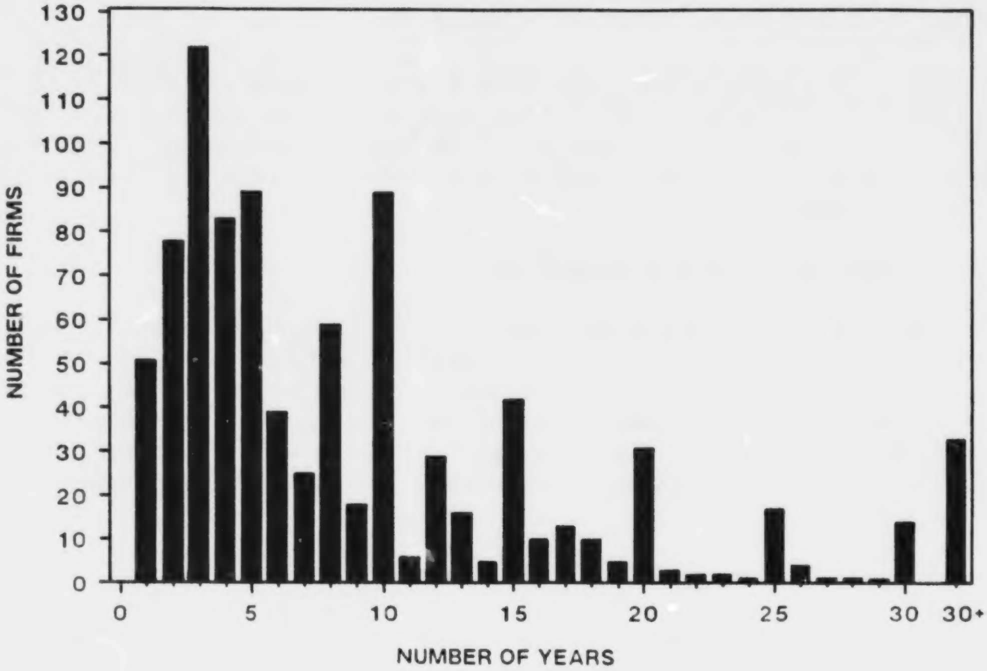
Buildings Serviced

The radon/asbestos firms serve a wide variety of buildings, ranging from single-family residences (96 percent), multi-family residences (86 percent), and offices (83 percent), to hospitals (59 percent).

---

[11] The results depicted in Exhibit 11 suggest that many firms estimated the number of years in multiples of five, i.e., 5, 10, 15, etc.

EXHIBIT 11
NUMBER OF YEARS FIRMS HAVE PROVIDED IAQ SERVICES



Evaluation Services

Only 38 percent of these firms provide one or more of the evaluation services. Ventilation system evaluations are provided by the greatest number of firms (21 percent), followed by pollutant source characterization (16 percent) and measuring air exchange rate (14 percent).

Mitigation Services

Over three-quarters (77 percent) of the 199 firms provide one or more mitigation services. Over half (55 percent) provide design recommendations, followed by source removal/modification (33 percent), actual construction/renovation (31 percent), and ventilation system modification (22 percent).

Personnel Available

Most of the firms are relatively small, with an average of four employees. Over half of the firms employ personnel other than those listed on the questionnaire.[12] The second most prevalent personnel are chemists (17 percent), followed by industrial hygienists (16 percent).

Age and Portion of Business

The radon/asbestos firms are quite new to the IAQ business. The average firm has been in the IAQ business for three years; the median is two years, the maximum is 20 years. IAQ activities constitute on average 67 percent of the firms' business.

IV. CONCLUSIONS

There are a number of conclusions that can be drawn from the results of EPA's Survey of IAQ Firms.

The non-industrial IAQ service industry is at an early stage in its development. Although some firms have been providing IAQ diagnostic and/or mitigation services for several decades, 47 percent have provided these services in non-industrial settings for ten or fewer years.

Most of the firms devote a relatively small percentage of their business to providing IAQ services to non-industrial clients.

Most of the nation's current non-industrial IAQ capacity is in the eastern part of the nation. The results of the survey indicate that a large majority of the IAQ firms (66 percent) are located in Regions I - V. Forty-five (45) percent of the nation's firms, however, responded that they serve a national client base.

Although the IAQ service industry as a whole provides a diversity of diagnostic and mitigation services, individual firms tend to be relatively specialized and geared toward diagnostic services. A very small proportion of the IAQ firms provide a wide range of diagnostic and mitigation services. Most firms specialize in one type of IAQ service, typically providing a limited number of evaluation services, or monitoring a subset of pollutants. Similarly, a relatively small percentage of firms offer a broad range of mitigation services.

The average national firm is relatively small, with an average of only 18 employees.

---

[12] The most frequently cited "other" personnel types include health physicist (11 percent), physicist (five percent), and geologist (four percent).

APPENDIX A

INDOOR AIR QUALITY SURVEY QUESTIONNAIRE

OMB Number 2060-0166
Expires 10-31-88

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

OFFICE OF
AIR AND RADIATION

July 21, 1988

Dear Sir or Madam:

The U.S. Environmental Protection Agency (EPA) seeks your cooperation in identifying and collecting information from companies that investigate and abate indoor air quality problems. Attached is a short profile containing questions on company location, personnel, qualifications, and indoor air quality services.

Completing this profile is voluntary; you do not have to respond. However, by completing it, you will assist EPA in evaluating the capacity of the private sector to solve indoor air quality problems, and the information you provide will be incorporated into a national data base on companies that provide indoor air quality services. Participation in this survey and inclusion in the data base will not be used to evaluate the proficiency or qualifications of any individual firm. EPA will accept partial responses so you may respond only to those questions that you can easily answer. If your firm provides indoor air quality services from more than one location, please fill out a profile for each location.

EPA is collecting this information because Title IV of the Superfund Amendments and Reauthorization Act of 1986 (SARA) directs EPA to coordinate government and private sector research and development related to improving indoor air quality. In partial fulfillment of this mandate, EPA is developing a data base of firms which offer indoor air quality diagnostic and mitigation services.

Please return the completed profile to EPA at the following address.

EPA Indoor Air Quality Profile
c/o ICF Incorporated
9300 Lee Highway
Fairfax, Virginia 22031-1207

An early response will ensure that your company is included in the data base. If you have any questions, please call EPA's Indoor Air Quality Profile Hotline at 1-800-727-1247. Thank you for your cooperation.

Sincerely yours,

Don R. Clay
Acting Assistant Administrator

OMB Number 2060-0166

Profile for Companies
Providing Indoor Air Quality Monitoring and Related Services

1. **In the spaces below, please print the name and address of your company, and the name, title, and phone number of a person that potential customers can contact.**

Company Name: ______________________________
Address: ______________________________
____
____
Contact Person: ______________________________
Title: ______________________________
Phone Number: ______________________________

Please describe the area served by your company.

( ) National
( ) Regional (Multi-State)
( ) Local

(If your company has more than one location from which indoor air services are available, please complete a separate profile for each location.)

2. **Is your company licensed, certified, or accredited by any Federal, State, or Local government agency, or any independent non-government association, laboratory, or other approval authority for your indoor air related activities?**

( ) Yes
( ) No

If yes, please provide the name, address, and phone number of the approval authority.

Name: ______________________________
Address: ______________________________
____
____
Phone Number: ______________________________

Please check the type of approval.

( ) Licensed
( ) Certified
( ) Accredited
( ) Other, please explain ______________________________

(If your company is licensed, certified, or accredited by more than one government agency or independent authority, please attach a list of all approval authorities and describe each type of approval.)

3. **Please check the type(s) of non-industrial buildings for which your company provides indoor air quality related services.**

( ) Private Residences
(1 or 2 family dwellings)
( ) Multi-Family Residences
( ) Office Buildings
( ) Others, please list ______________________________
____

( ) Public Buildings
( ) Schools
( ) Hospitals and other Health Care Facilities

4. **Please check the indoor air pollutants that your company can measure. For each air pollutant checked, please name the techniques and/or equipment that you use to sample and measure pollutants.**

( ) Carbon Monoxide
( ) Carbon Dioxide
( ) Nitrogen Dioxide
( ) Sulfur Dioxide
( ) Ozone
( ) Airborne Particles
( ) Pesticides
( ) Formaldehyde
( ) Other Volatile Organic Compounds
( ) Particulate Phase Organics
( ) Asbestos
( ) Fibrous Glass
( ) Radon
( ) Biological Agents
    ( ) Viable Fungi
    ( ) Fungal Spores
    ( ) Legionella
    ( ) Endotoxins
    ( ) Mycotoxins
    ( ) Other, please specify
( ) Lead
( ) Mercury
( ) Polychlorinated Biphenyls (PCBs)
( ) Polynuclear Aromatic Hydrocarbons (PAHs)
( ) Others, please list

If your company manufactures and/or markets any devices for use by non-technical individuals for monitoring the pollutants listed above, please name the pollutants and describe the device(s). Please feel free to attach additional information.

Pollutant Monitored	Type of monitoring device (e.g. passive, real-time, personal, etc.)

5. **Please check other tests or evaluation procedures your company can perform.**

( ) Ventilation System Evaluation
( ) Air Exchange Rate
( ) Pollutant Source Characterization
( ) Temperature/Relative Humidity
( ) Others, please list

( ) Noise
( ) Occupant Health Status
( ) Lighting
( ) Psycho-Social Factors

6. **Please check the kinds of services your company provides to abate indoor air quality problems.**

- ( ) Design Recommendations
- ( ) Architectural Engineering Specifications
- ( ) Actual Construction/Renovation
- ( ) Building Commissioning (initial occupancy)
- ( ) Operation and Maintenance
- ( ) Source Removal/Modification
- ( ) Air Cleaning/Filtration Equipment
- ( ) Ventilation System Modification
- ( ) Training of Building Managers/Occupants
- ( ) Others, please list ____

____

7. **Please check the types of academic and technical personnel available to respond to indoor air quality problems and identify the number of each.**

Type	Number	Type	Number
( ) Architect	______	( ) Microbiologist	______
( ) Industrial Hygienist	______	( ) Medical Doctor	______
( ) Air Pollution Scientist	______	( ) Epidemiologist	______
( ) Industrial Engineer	______	( ) Psychologist	______

Your prompt reply is appreciated.

APPENDIX B - FIRMS RESPONDING TO EPA SURVEY

This Appendix lists the private sector firms that responded to the Survey of IAQ Firms by the publication date of this report, and summarizes the information reported. It does not include governmental or public sector agencies that submitted responses. The listing is alphabetically organized by State and city. An alphabetical index of firms is also included in Appendix C.

EPA HAS NOT ATTEMPTED TO VERIFY THE ACCURACY OF THE INFORMATION REPORTED OR EVALUATED THE QUALITY OF THE SERVICES THEY CLAIMED TO PROVIDE. INCLUSION ON THIS LIST ONLY DEMONSTRATES THAT A FIRM FILLED OUT A QUESTIONNAIRE. INCLUSION DOES NOT CONSTITUTE OR IMPLY APPROVAL, RECOMMENDATION, ENDORSEMENT, OR ACCREDITATION OF ANY KIND BY EPA.

A. Use of this Appendix

Some individuals or organizations desiring the services of an indoor air quality diagnostic and mitigation firm may wish to use this list, as one would use the phone book -- to identify firms who claim to provide such services. Before contacting any firms, you may want to check with your Regional EPA Office, and/or your State or local health or environmental office to obtain information concerning indoor air quality diagnostic and mitigation procedures. This will help to clarify the type of services you desire. The state or local office may also provide some services. You should contact several firms before choosing one that best fits your needs. When contacting these firms, you should obtain as much information as possible concerning the nature of the firm and the services they perform before making your decision.

B. Contacting Individual Firms

Once you have made a list of firms to contact, call each one to obtain information important to choosing the one that best suits your needs:

o **Carefully describe the problem.** Try to avoid presupposing what is causing the problem, emphasizing instead that you want the problem diagnosed.

o **Ask the following questions** plus others that seem appropriate:
- Can you diagnose problems of this nature?
- How long has the firm done this type of work?
- What kind of personnel would perform the work?
- How much will it cost/ do you require a deposit?
- How long has the firm been in business?
- Is this a small specialized firm, or a large firm with varied services?
- Does the firm sell mitigation services or devices, such as air cleaners, or air duct cleaning services as their main line of business?

Firms that have been in business for a long time, and have a permanent address have a better chance of having developed a reputation that can be checked out. The size of the firm may be important for some projects where support services may be needed. Firms which sell mitigation devices as their main business may have a conflict of interest, tending to gear their diagnosis and recommendations toward the use of their mitigation devices or services.

o **Ask the company representative to explain the nature of the diagnosis and/or mitigation they will perform,** and be sure that the methods are fully described, and logically explained.

o **Ask for references,** including other clients that have used the firm and can verify that the firm can provide the services you need, and that they were satisfied with the quality of their services.

o **Reject any firm that misrepresents itself as having been approved or endorsed in any way by virtue of its listing in this report.** Report any such occurrence to the Indoor Air Division (ANR-445), Environmental Protection Agency, Washington D.C., 20460.

Before contracting with a specific firm, you should carefully determine whether the firm is reputable. In addition to checking out their references, you should:

o **Contact the local Better Business Bureau and your State or local Consumer Protection Office** to determine if any complaints have been lodged against the firm. Appendix D contains a list of these offices.

o **Report any instances of fraud or misrepresentation** to your local Business Bureau or your local Consumer Protection Office. These organizations may also assist you in resolving disputes or conflicts with the company you choose.

Finally, you should carefully read the contract to make sure that the services to be provided are carefully articulated, as our warranties, if any, to retest and continue to resolve problems if the reoccur.

C. Updating this Appendix

This appendix will be updated periodically. Firms that are not listed may fill out a questionnaire and submit it to the Indoor Air Division of EPA.

Service Area: National (N); Regional (R); Local (L)

Evaluation Services: Ventilation system evaluation; Temperature and humidity; Air exchange rate; Pollutant source characterization

Monitoring Services: Combustion gases (CGS); Airborne particles (PAR); Formaldehyde (FMD); Other VOCs (VOC); Asbestos (ASB); Radon (RDN); Biological contaminants (BIO); Pesticides (PST)

Mitigation Services: Source removal/modification; Operation & maintenance; Ventilation system modification

Personnel Types: Architect; Industrial hygienist; Ventilation engineer; Medical doctor or Microbiologist; Chemist

Total Employees: Total number of IAQ employees

Buildings Serviced: Non-Residential includes Office buildings; Public buildings; Schools; and Health care facilities

Service Area: National (N); Regional (R); Local (L)

Evaluation Services: Ventilation system evaluation; Temperature and humidity; Air exchange rate; Pollutant source characterization

Monitoring Services: Combustion gases (CGS); Airborne particles (PAR); Formaldehyde (FMD); Other VOCs (VOC); Asbestos (ASB); Radon (RDN); Biological contaminants (BIO); Pesticides (PST)

Mitigation Services: Source removal/modification; Operation & maintenance; Ventilation system modification

Personnel Types: Architect; Industrial hygienist; Ventilation engineer; Medical doctor or Microbiologist; Chemist

APPENDIX D - BETTER BUSINESS BUREAUS AND CONSUMER PROTECTION OFFICES

Better Business Bureaus

Better business bureaus (BBBs) are non-profit organizations sponsored by local businesses. BBBs offer a variety of consumer education programs and materials, handle consumer inquiries, mediate and arbitrate complaints, provide general information on companies, and maintain records of consumer satisfaction or dissatisfaction with individual companies.

This material is taken from the 1990 Consumer's Resource Handbook, prepared by the Office of the Special Adviser to the President for Consumer Affairs, The White House, Washington, D.C., and the United States Office of Consumer Affairs.

State, County, and City Consumer Protection Offices

State and local consumer protection offices resolve individual consumer complaints, conduct information and educational programs, and enforce consumer protection and fraud laws. Local consumer protection offices can be particularly helpful for both pre-purchase information and complaint handling because they are often very familiar with local businesses and laws. Most of these offices require complaints in writing. Call to find out the correct procedure for filing a complaint and what sales documents are needed.

This material is taken from the 1990 Consumer's Resource Handbook, prepared by the Office of the Special Adviser to the President for Consumer Affairs, The White House, Washington, D.C., and the United States Office of Consumer Affairs.
